Caller Log Application

Project Objective:

Monitoring calls in an organization is extremely important. Organizations that do not have call monitoring generally have difficulty tracking customer interactions and monitoring the performance of their employees. Our plan is to develop a caller log, which is a valuable tool for any organization that handles a high volume of phone calls, as it allows them to keep a detailed record of all incoming and outgoing calls.

The users can search out the contact details from the directory and make any update in the call logs.

User stories:

- As a user I should be able to securely login in the system.
- As a user, I should be able to add a new call to the log.
- As a user, I should be able to view the list of calls added.
- As a user, I should be able to search a particular entry in the log.
- As a user, I should be able to edit an existing entry in the call log.
- As a user, I should be able to delete a call log entry.
- As an admin, I should be able to securely login in the system.
- As an admin, I should be able to manage, add, and remove user accounts from the system.
- As an admin, I should be able to manage the view/edit permissions for the users in the system.

User Scenario Specifications:

User scenario specifications are a set of detailed descriptions that outline the various steps a user takes to carry out a specific task or goal when using a product or service. These specifications provide a clear and concise outline of the user's interactions with the product or service, including their goals, motivations, and pain points.

Our system have main user scenario like,

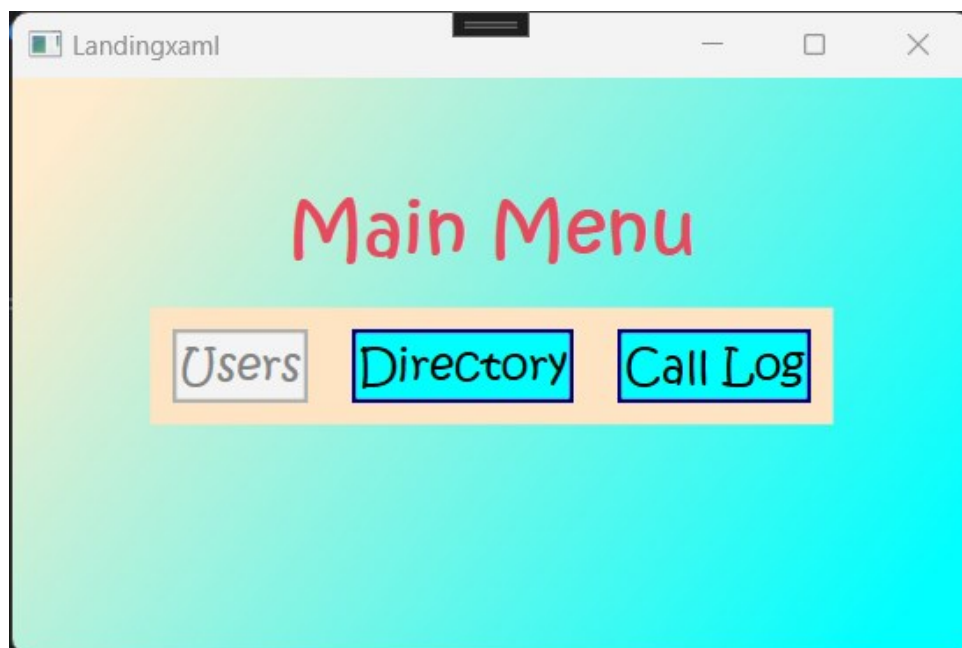

- Login into the system.
- Selection of function (different as per user)
- Managing users
- Managing permissions
- Adding a new call
- Viewing call logs
- Searching for a specific call
- Editing a call
- Deleting a call

User Scenario Specifications for Normal User and Admin:

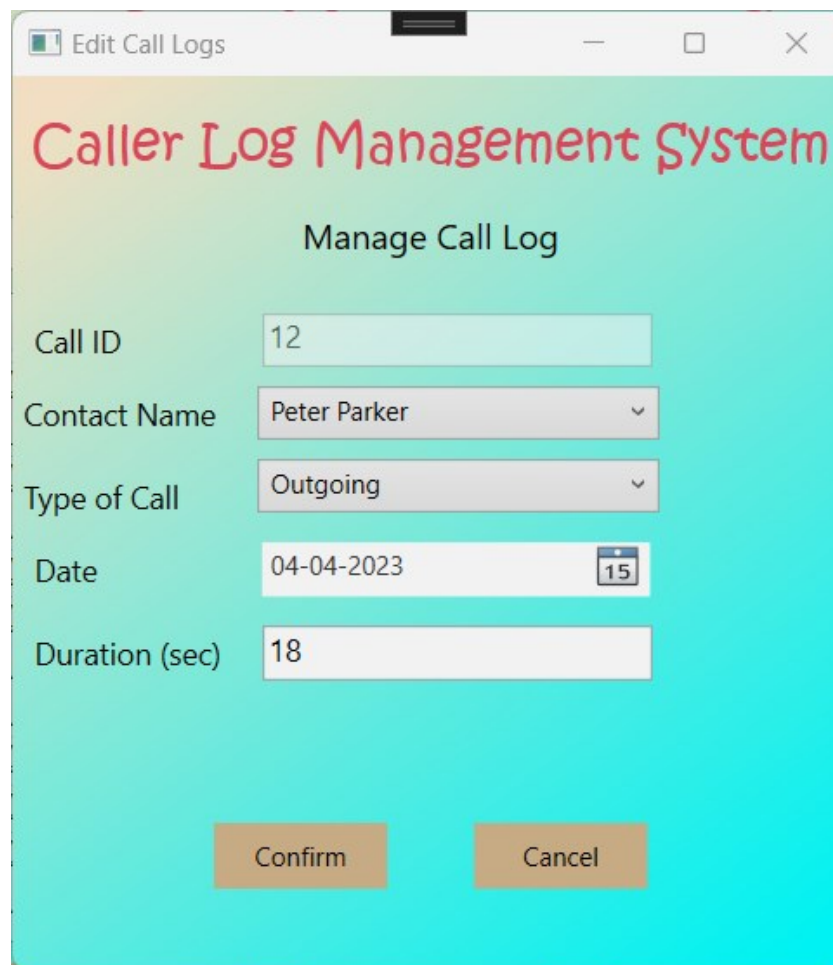

- **User:**
 1. Login as a normal user: with ID and password.

2. Selection of function on main screen:

3. Adding a new call: The user should be able to add a new call to the log by supplying the caller's name, phone number, call date, call time, and any notes related to the call.

The screenshot shows a window titled 'Edit Call Logs' with a light blue header. Below the header, the text 'Caller Log Management System' is displayed in a large, stylized font. Underneath, the title 'Manage Call Log' is centered. The form contains the following fields:

- Call ID:** A text input field containing the value '12'.
- Contact Name:** A dropdown menu with 'Peter Parker' selected.
- Type of Call:** A dropdown menu with 'Outgoing' selected.
- Date:** A date input field showing '04-04-2023' with a calendar icon.
- Duration (sec):** A text input field containing the value '18'.

At the bottom of the form, there are two buttons: 'Confirm' and 'Cancel'.

4. Viewing call logs: The user should be able to view a list of all calls that have been added to the log. The list should include the caller's name, phone number, call date, call time, and any notes related to the call.

The screenshot shows a window titled 'Call Log List' with a light blue header. Below the header, the text 'Caller Log Management System' is displayed in a large, stylized font. Underneath, the title 'Manage call logs' is centered. A search bar is located above the table. The table contains the following data:

idCall	idContact	name	telephoneNumber	typeOfCall	dateTime	duration
5	2	Carlos Abaffy	2268998056	Incoming	6/12/2022 12:00:00 AM	15
12	3	Peter Parker	2267998057	Outgoing	4/4/2023 12:00:00 AM	18
13	2	Carlos Abaffy	2268998056	Missed	1/23/2023 12:00:00 AM	14
16	3	Peter Parker	2267998057	Outgoing	11/5/2023 12:00:00 AM	69
19	2	Carlos Abaffy	2268998056	Incoming	11/4/2023 12:00:00 AM	13
23	2	Carlos Abaffy	2268998056	Outgoing	4/12/2023 12:00:00 AM	10
25	3	Peter Parker	2267998057	Incoming	4/12/2023 12:00:00 AM	10
29	3	Peter Parker	2267998057	Incoming	4/4/2023 12:00:00 AM	96
30	2	Carlos Abaffy	2268998056	Missed	11/4/2023 12:00:00 AM	100
31	2	Carlos Abaffy	2268998056	Incoming	12/4/2023 12:00:00 AM	10
32	2	Carlos Abaffy	2268998056	Missed	3/4/2023 12:00:00 AM	123
34	3	Peter Parker	2267998057	Outgoing	12/4/2023 12:00:00 AM	635
42	4	Tony Stark	8511150011	Outgoing	2/4/2023 12:00:00 AM	000000

At the bottom of the window, there are three buttons: 'Add New Call Log', 'Edit Call Log', and 'Delete Call Log'.

5. Searching for a specific call: The user should be able to search for a specific call in the log by entering the caller's name, phone number, or date of the call.

42	4	Tony Stark	8511159911	Outgoing	2/4/2023 12:00:00 AM	999999

- **Admin:**
 1. Login as Admin: with ID and password.

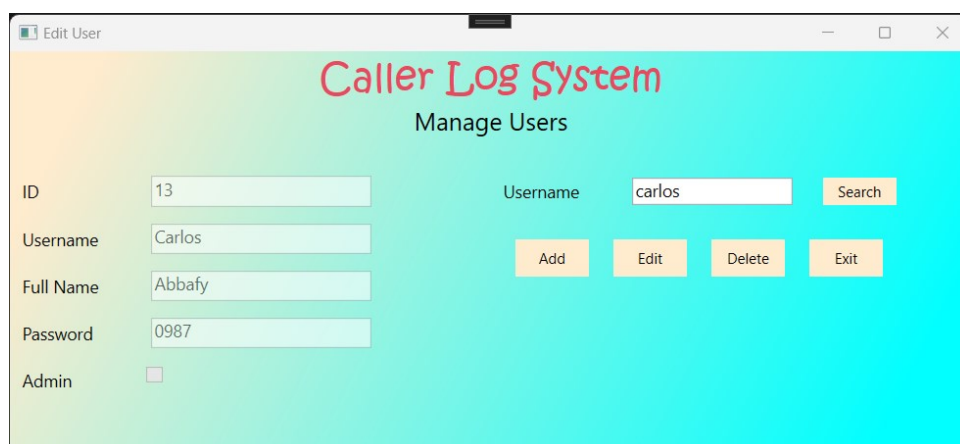

2. Selection of function on main screen:

3. Managing users: The admin should be able to add, remove, and manage user accounts for the system.

4. Managing permissions: The admin should be able to set permissions and access levels for each user based on their role and responsibilities.

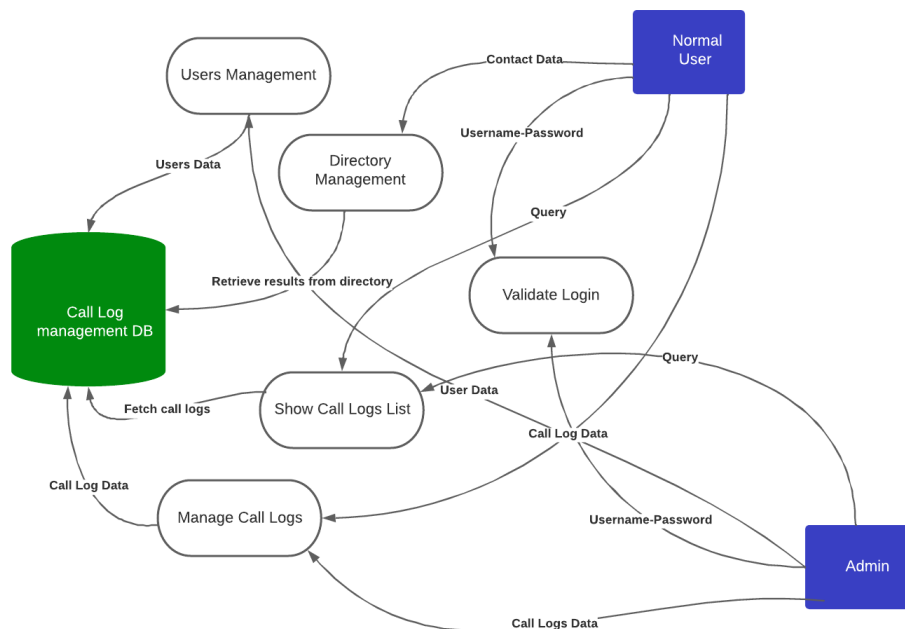

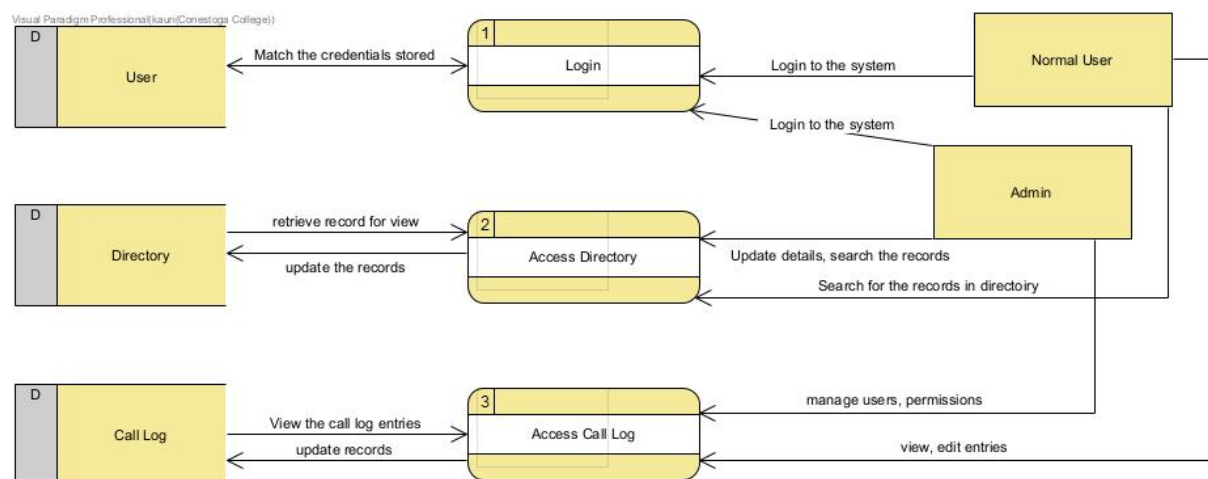

Context Diagram:

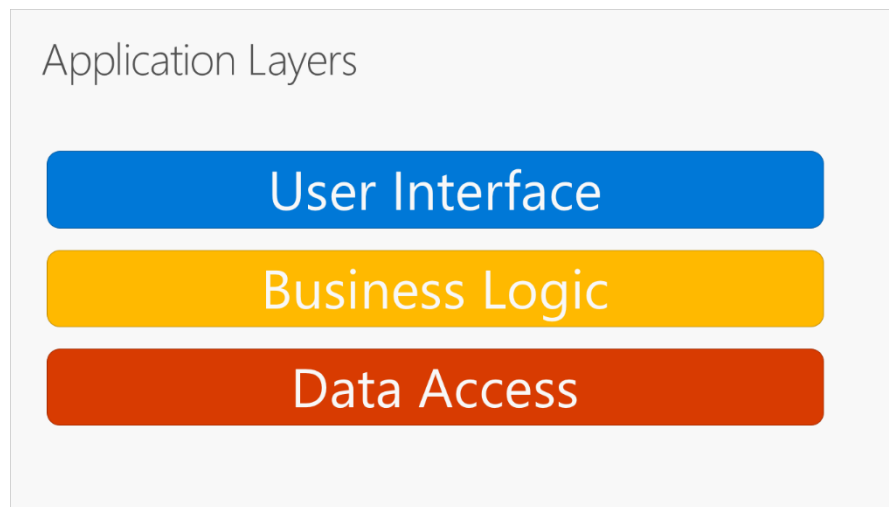

Caller Log management application is used by two external entities, Normal user and admin which use the application for different purposes.

Level 0:

Level 1:

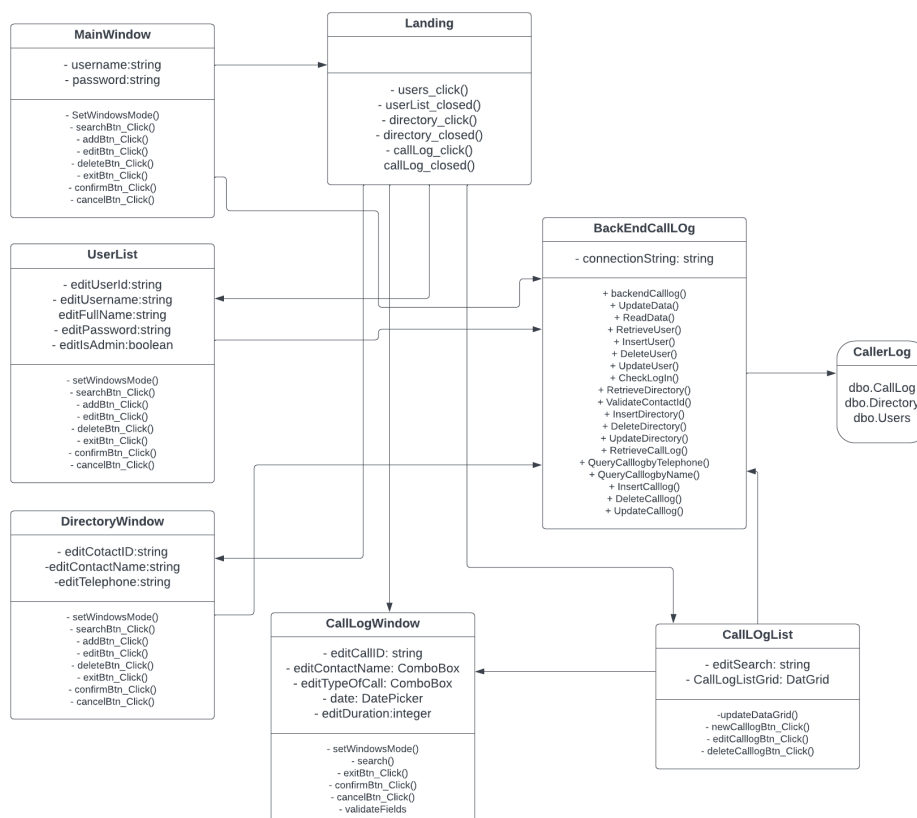

**Context diagram and data entities:**

Architecture:

User interfaces include the screens that are visible to user and allow the input output with the application. The caller log application use WPF (Windows Presentation Foundation) to create the front end of the system.

Business logic includes the code written to process the information which is designed in C# programming language in Visual Studio.

The data access layer takes input request from business layer, retrieve the data stored in database and outputs the requested service with the data.

Class Diagram:

Database:

Database for the application is developed in SQL server. There are three tables created to store the user's information, call logs data and directory data. The tables are shown as follows:

Call Log data:

TapasweeDixit\SQL...rLog - dbo.CallLog			
	Column Name	Data Type	Allow Nulls
▶	idCall	int	<input type="checkbox"/>
	idContact	int	<input type="checkbox"/>
	typeOfCall	char(1)	<input type="checkbox"/>
	dateTime	date	<input type="checkbox"/>
	duration	int	<input type="checkbox"/>
			<input type="checkbox"/>

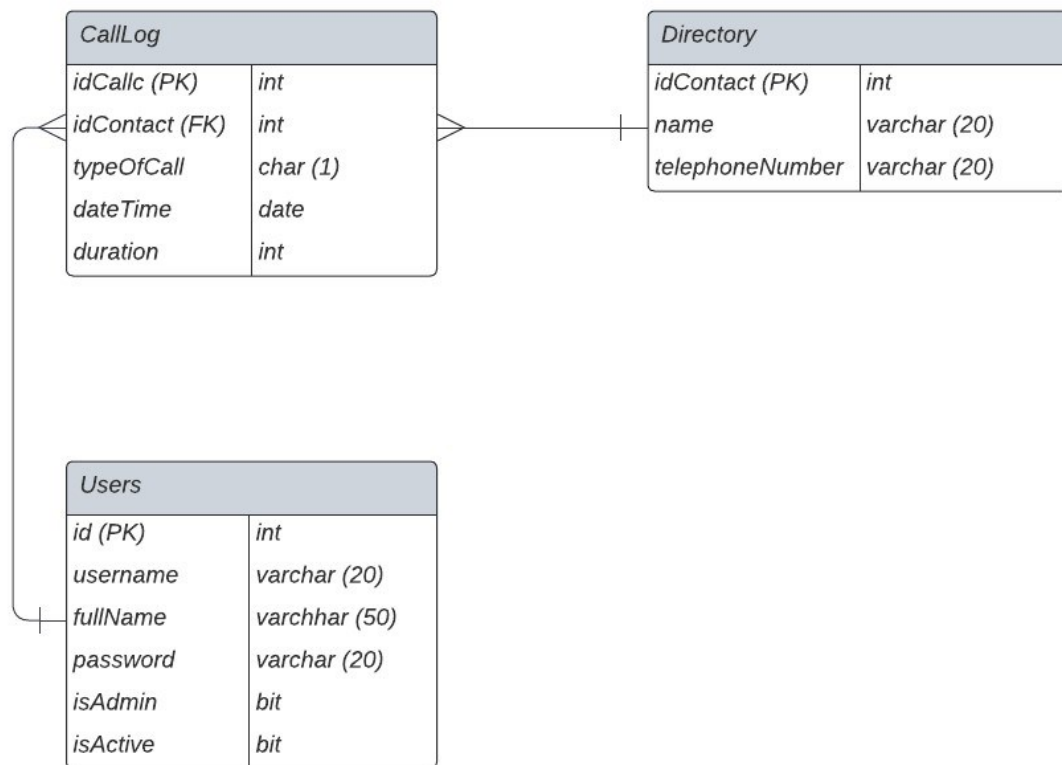

Users' information:

TapasweeDixit\SQL...lerLog - dbo.Users			
	Column Name	Data Type	Allow Nulls
▶	id	int	<input type="checkbox"/>
	username	varchar(20)	<input type="checkbox"/>
	fullName	varchar(50)	<input type="checkbox"/>
	password	varchar(20)	<input type="checkbox"/>
	isAdmin	bit	<input type="checkbox"/>
	isActive	bit	<input type="checkbox"/>
			<input type="checkbox"/>

Directory data:

TapasweeDixit\SQL...og - dbo.Directory			
	Column Name	Data Type	Allow Nulls
▶	idContact	int	<input type="checkbox"/>
	name	varchar(20)	<input type="checkbox"/>
	telephoneNumber	varchar(20)	<input type="checkbox"/>
			<input type="checkbox"/>

ER Diagram:

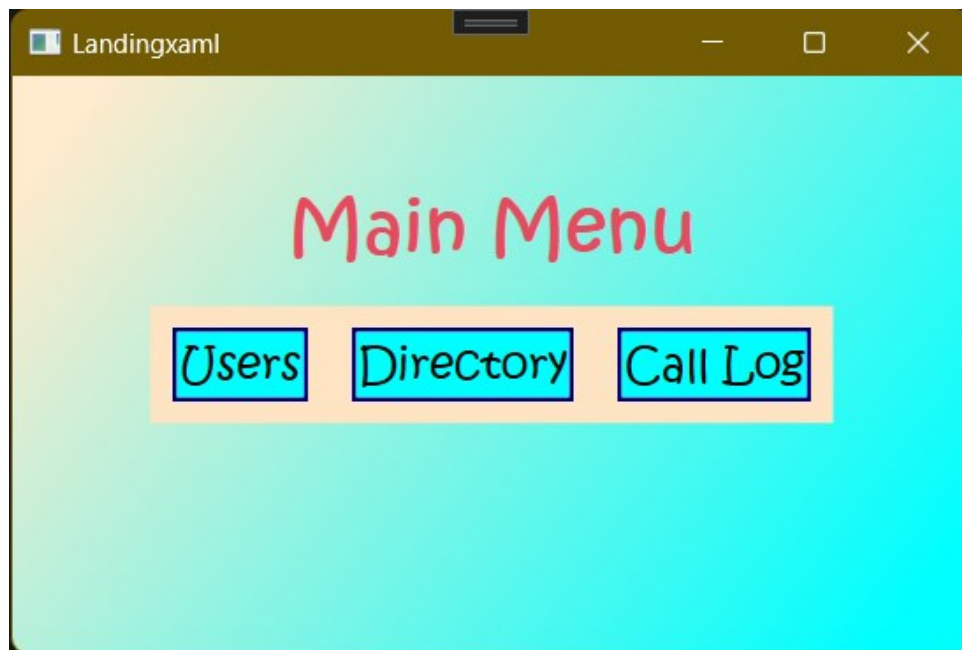

Front end:

Front end of the application is developed using WPF feature in the Visual Studio.

Back end:

Back end is designed in C# programming language using Visual Studio IDE.

**Test Cases:**

ID: UC001	Name: Login as a normal user
Description: A regular user must be able to login in the system	
Priority: High	
Steps	Expected Result
Launch the system.	The Login Page is presented.
The user introduces his credentials.	The system validates the user's credential.
The user is granted access to the system.	The user can see the Main menu with 2 options: manage directory and manage call logs.

ID: UC002	Name: Login as an admin user
Description: Admin user must be able to login in the system for manage the users.	
Priority: High	
Steps	Expected Result
Launch the system.	The Login Page is presented.
The user introduces his credentials.	The system validates the user's credential.
The user is granted access to the system.	The user can see the Main menu with 3 options: manage users, manage directory, and manage call logs.

ID: UC003	Name: Manage users (Only for admin users)
Description: Admin user must be able to manage the users of the system	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the user button.	The system allows the user to get into the user management option.
The user manages the users of the system.	The system allows to add, edit and delete the users of the system.

ID: UC006	Name: Search Call Logs
Description: User can search for call logs using either name or number.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the Call Log button.	The system allows the user to get into the manage Call log option.
The user searches for call logs using name of contact.	The system allows to search the call logs using the name of the contacts.

ID: UC008	Name: Add a new Call Log
Description: User must be able to add a new call log.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the Call log button.	The system allows the user to get into the manage call log option.
The user logs a new call.	The system allows to add a call log to the list of call logs.

ID: UC009	Name: Edit a Call Logs
Description: User can edit a selected call log.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the Call Log button.	The system allows the user to get into the manage call log option.
User edits the call log.	The system allows to edit an existing call log from the list of call logs.

ID: UC010	Name: Delete a Call Log
Description: User can a delete a call log.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the call log.	The system allows the user to get into the manage call log option.
User deletes a call log.	The system allows the user to delete an existing call log.

ID: UC011	Name: Search Call Logs by number
Description: User can search for call logs using number.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the Call Log button.	The system allows the user to get into the manage Call log option.
The user searches for call logs using number.	The system allows the user to search the call logs using the number of the contacts.

ID: UC012	Name: Search Call Logs by Contact Name
Description: User can search for call logs using name.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the Call Log button.	The system allows the user to get into the manage Call log option.
The user searches for call logs using name.	The system allows the user to search the call logs using the name of the contacts.

ID: UC005	Name: Manage Contacts
Description: User must be able to search, add, edit and delete .	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the 'Directory' button.	The system allows the user to get into the contacts management option.
The user tries to search contacts in the directory.	The system allows to search the contacts in the directory.
The user tries to manage contacts in the directory.	The system allows the user to add, edit and delete the contacts in the system.

ID: UC013	Name: Delete a Contact with Call Logs
Description: User tries to delete a contact that has call logs.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the 'Directory' button.	The system allows the user to get into the contacts management option.
User tries to delete a contact that has call logs.	The system allow DOES NOT allow the user to delete the contacts and shows messages "contact CANNOT BE DELETED, has registered call logs."

ID: UC014	Name: Register the same contact twice.
Description: User tries to register the same number twice.	
Priority: High	
Steps	Expected Result
Login in the system.	The system validates the user's credential.
The user gets in the Main menu and press the 'Directory' button.	The system allows the user to get into the contacts management option.
The user tries to register the same number twice.	The system allow DOES NOT allow the user to add the same number twice.

Future plans:

The future prospects for the call log application includes:

- Exporting call logs: The user should be able to export the call logs to a file, such as a CSV or Excel file, for further analysis or record keeping.
- Adding tags: The user should be able to add tags to calls to categorize them and make them easier to find later.
- Sorting calls: The user should be able to sort the list of calls by date, time, or caller name.
- Customizing the system: The admin should be able to customize the system to meet the needs of the organization, such as adding new fields to the call log or creating custom reports.
- Backing up data: The admin should handle backing up the data in the system regularly to ensure that it can be restored in case of a data loss event.
- Monitoring system performance: The admin should watch system performance to ensure that it is running smoothly and efficiently and take steps to optimize performance if necessary.
- Managing security: The admin should handle managing system security, such as setting up user authentication and authorization, implementing data encryption, and monitoring for security threats.
- Managing system upgrades: The admin should handle managing system upgrades, such as installing updates and patches, and ensuring that the system remains up-to-date and secure.
